

Before you **print**
While you **print**
After you **print**

Garth Koppel - Celmac

Garth started out as a mechanical engineer where he created and designed industrial gearboxes. This was a great job to start his career where he gained a unique approach to problem solving, which has stood him in good stead ever since.

He was then tempted into the print industry via his father where for the next 8 years he learnt all about prepress as well as all aspects of digital printing and finishing.

It was at this time that he developed an interest in printer break/fix and profiling, no doubt fuelled by spending too much time looking over the shoulders of the technicians!

In 2010 he joined Celmac. For the last 10 years he has spent his time there learning new technologies, profiling techniques and a range of software solutions. His current role includes servicing a range of printers' finishing equipment as well as software support.

Garth is a PRINTING United Alliance Qualified Digital Colour Professional.
